Your Children and DEET The American Academy of Pediatrics (AAP) recommends the following precautions when using insect repellents: * Apply repellents only to exposed skin and/or clothing. * Never use over cuts, wounds or irritated skin, and do not apply to eyes or mouth. * Do not allow children to handle repellent. Use your own hands to apply repellent to children. Do not apply to children's hands. * After returning indoors, wash treated skin with soap and water. * If a child develops a rash or other apparent allergic reaction from a repellent, stop using it, wash it off, and call the local poison control center for further guidance. 202-625-3333 • TTY-202-362-8563.					1	2	3	Always follow label instructions when using repellents.
4	5	6	7	8	9	10	The AAP says that insect repellents containing up to 30% DEET are safe for use on children aged two months and up.	
11	12	13	14	15	16	17	Insecticides kill mosquitoes. Repellents do not.	
18	19	20	21	22	23	24	Formulations with higher concentrations of DEET will repel mosquitoes and ticks for longer periods of time.	
25	26		27	28	29	30	31	Try a DEET alternative – look for repellents containing picaridin or oil of lemon eucalyptus.
